# LEHMANN Management Software LMS

Description

LEHMANN Management Software LMS is a software based on Windows® for assigning and managing access rights as well as for configuring the LEHMANN MIFARE® RFID systems. With LMS, for example, the operating mode (assigned use or shared use) for the RFID systems as well as the individual authorizations for users are defined. Permissions are presented in a user-friendly matrix view or in a list view.

Due to the possibility of grouping, the authorizations can be assigned and also withdrawn not only for individual persons but also for a large number of transponders and / or RFID systems at the same time by a mouse click. If required, assistant functions in the software support the LMS user by assigning new transponders or RFID systems.

The LEHMANN RFID systems offer in conjunction with the LMS software a maximum security. For example, a lost transponder can easily be replaced with just a few mouse clicks. If required, a logging function can also be activated in the software that records activities at the RFID systems. Of course, in addition to the corresponding deletion functions of personal data, the software also offers further technical and organizational measures to enable the requirements of the General Data Protection Regulation (DSGVO) to be implemented. The software is installed by the customer within their IT infrastructure, which means that all data remains in its responsibility.

Due to the modularity, the software can be optimally adapted to the individual requirements. The software offers flexible application options for companies of all sizes: whether a single-user solution for smaller projects, or a company-wide network solution with several LMS users.

Technical requirements:

Client:
- 32 or 64 Bit Windows (Win7 / Win8 / Win10)
- 4 GB RAM
- USB-port for USB desktop reader

Server:
- 64 Bit Windows (Win7 / Win8 / Win10)
- 4 GB RAM

LEHMANN®

Required components

- Licence key for the activation of LEHMANN Management Software LMS for one user with admin rights
- USB desktop reader for the data transfer between LMS and transponder or smartphone
- App LEHMANN Data Transfer on an Android-based and NFC-enabled smartphone for data exchange between software and RFID systems.
- LEHMANN MIFARE® RFID systems L033 with firmware V00_01_79 or higher and MIFARE® DESFire® transponder with min. 4k storage according to E-SOLUTIONS catalog 2018. Third-party transponders must be tested for compatibility! LEHMANN MIFARE® RFID systems with an older firmware version can be updated with the separate software LEHMANN Firmware Updater.
- Optional software module: Licence key for the activation of five additional LMS users.

Card with LMS Licence key

USB desktop reader
